

1.ABSTRACT

Online grocery shopping is a supermarket that allows online purchasing of fruits, vegetables etc. you can conveniently use a computer to place your order online. you can select your choice of fruits and vegetables from the grocery store. once you have finalized the order, then you can add an item to the shopping cart. When you checkout from shopping cart, then your order will be developed at the doorstep. When you are satisfied with this order, service and quantity then you pay cash on the spot upon delivery.

- Admin has monitor everything in online grocery shop
- Admin can add ,delete and update the grocery item(fruits and vegetable etc)
- Admin can verify the orders of the online shop
- The user can view the grocery shop item(fruits ,vegetables etc)
- The user fill a form providing his/her name ,number, address, city delivery timeslot and payment method(cash on delivery) after he/she check out the shopping cart
- Grocery item(fruit,vegetable etc) will be delivered to the user at the home with respect to the selected time slot

2.INTRODUCTION

Here's a draft online grocery shopping introduction for a software requirements specification (SRS) document:

1.1 Purpose

The purpose of this Software Requirements Specification (SRS) document is to define the requirements for an online grocery shopping application. The application will allow customers to browse and purchase groceries from the convenience of their homes or on-the-go via a web or mobile interface.

1.2 Project Scope

The online grocery shopping application will provide the following main features:

User registration and authentication

Browse products by category, search, and filters

Add products to a virtual shopping cart

Checkout process with payment integration

Order tracking and status updates

User profile and order history

Administrative functionality for product/inventory management

The initial version will focus on the core e-commerce functionality for a single grocery store. Future iterations may include expanded features such as subscription services, recipes, dietary preferences, and support for multiple store locations.

1.3 Definitions, Acronyms, and Abbreviations

Term	Definition
SRS	Software Requirements Specification
UI	User Interface
UX	User Experience

1.5 Overview

The remaining sections of this SRS document provide a detailed description of the functional and non-functional requirements, use cases, constraints, assumptions, and other specifications for the online grocery shopping application. This document will serve as a guide for the development and validation efforts.

3.FUNCTION REQUIREMENT

➤ **Registration:**

Users' information has to be compelled to be registered within the system thus on establish every one of them unambiguously and do the required group action as real potential. like on the name of the bill are issued. On the far side, this plenty of things require measure there wherever we will reference him.

Without registration, there are a few options and pages one user can see which are landing on the home page and taking the features to read but he won't be allowed to use those. For use, he will have to register. One person needs to put all the details correctly and precisely as it will be helpful in identifying them and believing that he is the real person who has booked for the same.

• **Login:**

After registration one will register within the system because of the operator of the system either on behalf of the user. When this he has the different helpful interfaces accessible for any actions. Here either bride or groom both have to log in with their unique identity and passwords. After this, they will be directed to the primary user interface from where they have further options.

• **Logout:**

Logging out means to end access to a computer system or a website. Logging out informs the computer or website that the current user wishes to end the login session. Log out is also known as log off, sign off or sign out

• **Forgot password:**

This is quite often that people tend to forget the password they keep for the login. So, this could be very tedious and hectic to recover the password manually in case if one needs to login in an emergency. So, to overcome this problem we have this module named as forgot the password, and using this module users can recover their password in seconds.

So here we need only to put our registered email Id and hit the enter. Then one confirmation email will go to the email where he may reset the password. In seconds one can use this module and get rid of the forgetting password problem.

➤ **view product:**

The view Product function is typically responsible for displaying the details of a specific product to the user. Its primary purpose is to retrieve and present all relevant information about a particular product, such as its name, description, price, images, and any other associated data.

➤ **search product:**

Ability for users to add products to a shopping cart. Display of the current contents of the shopping cart, including product details, quantities, and total cost. Option to update quantities or remove items from the shopping cart. Persistence of the shopping cart across user sessions or devices.

➤ **Add to cart:**

Add to cart means the action of adding an item to the virtual purchasing order. When a consumer locates an item they wish to purchase, they click the icon. The item is then placed in their purchasing cart until they decide to proceed to checkout or continue browsing.

➤ **Product details:**

Each product listing should provide detailed information such as the product name, brand, weight or volume, price, unit price, nutritional information and high-quality images.

- **Pricing**

Store owners should be able to set prices for their products

- **promotions:**

create targeted promotions and discounts to attract customers.

➤ **Reviews and feedback:**

Users should be able to read reviews and ratings left by other users to help them make informed purchasing decisions

4. NON-FUNCTION REQUIREMENT

➤ Performance :

This includes requirements related to the speed, scalability, and responsiveness of the system. For example, a requirement that the system should be able to handle a certain number of concurrent users or process a certain amount of data within a specific time frame.

➤ Security:

This includes requirements related to the protection of the system and its data from unauthorized access, as well as the ability to detect and recover from security breaches.

➤ Usability:

This includes requirements related to the ease of use and understandability of the system for the end-users.

➤ Reliability:

This includes requirements related to the system's ability to function correctly and consistently under normal and abnormal conditions.

➤ Maintainability:

This includes requirements related to the ease of maintaining the system, including testing, debugging, and modifying the system.

➤ Portability:

This includes requirements related to the ability of the system to be easily transferred to different hardware or software environments.

➤ **Compliance:**

This includes requirements related to adherence to laws, regulations, industry standards, or company policies.

Payment type	varchar	20

Table name : cart item

Field name	Data type	Size
cart id	Number	20
Total cost	Number	20
Quantity	varchar	20

10.CONCLUSION

- It saves time and energy you don't have to waste your time going to stores, dealing with crowds and standing in lines
- 24/7 availability-online grocery stores are open round the clock of 24/7..the availability of online stores give you the freedom to shop at your own convenience
- Variety- another advantage of e-grocery is variety you can visit many stores to find the same selection...!!
- Comparison of prices it allows you to easily check prices and compare with just a few clicks it is very straightforward to conduct price comparisons from one site to another..
- Customers are usually satisfied- now a days, shopping online is very reliable.. customers can give feedback and reviews...about products !!
